

Relationship Validation Rules Summary

These checks use formula which allow a range of possible reported values. Failures will display error codes in the Check Table of the respective worksheet. This summary shows the number of errors detected for each rule, per worksheet that has relationship rules.

Worksheet	Rule Id	Dimension	Formula	Error Count
Local_Claims	LOCAL_CURR_GT_UAE	CURR_TYPE_BOOK	AED<LC1+5	0
Local_Claims	US_GT_5K	L_REP_CTY	5K<US	0

Equality Check Summary

Equality Check failures result in the difference between the reported value and the expected value being displayed in the Check Table. Zero values indicate there is no difference between the reported value and the expected value. This summary shows the maximum difference, for each worksheet that define Equality Checks.

Worksheet	Max Difference
Local_Claims	0
